

Example High-Level Diagram

- Here’s a simple structure to draw:

Data Flow Example:

- Step 1:** User visits the marketplace (Frontend) → Product data is fetched from Sanity CMS.
- Step 2:** User adds items to the cart → Checkout → Data is sent to Sanity CMS to record the order.
- Step 3:** Shipment status is updated via a Third-Party API and displayed to the user.
- Step 4:** Payment details are processed securely by the Payment Gateway → Confirmation recorded in Sanity CMS.

Define Key Workflows

Work flows in text format, like this:

- User Registration:**
 - User signs up on the frontend → Data sent to Sanity CMS → Confirmation sent to the user.
- Product Browsing:**
 - User browses products on the frontend → Data fetched via Sanity CMS Product API → Displayed dynamically.
- Order Placement:**
 - User adds items to the cart → Proceeds to checkout → Order details are stored in Sanity CMS.
- Shipment Tracking:**
 - Order status updates fetched via Shipment Tracking API → Displayed to the user.
- Payment Processing:**
 - User enters payment details → Sent to Payment Gateway → Confirmation sent back to the user and recorded in Sanity CMS.
